

RS-44 Now Available at North Fork!

DID YOU KNOW?

**Marplat carries ComStar's RS-44...
 The ONLY proven, drop-in
 replacement for R22!**

Used in Europe for over a decade, RS-44 is the ONLY drop-in replacement for R-22 available in the United States. ComStar's R-44 refrigerant is a true drop-in replacement that requires no system changes. Lubrication change is not required and RS-44 is approved for cap tubes and TXV. RS-44 operates at a lower discharge pressure and temperature than R22, so it can help to increase the lifespan of the compressor. In addition, it is a more energy efficient refrigerant than R-22 which should result in lower energy use.

ADVANTAGES OF RS-44:

- * Approved by Carrier Commercial as the drop-in replacement refrigerant for R22.
- * Operates in R22 systems without requiring an oil change to expensive synthetic oil.
- * Lower energy consumption.
- * Operates at a lower discharge pressure and temperature, reducing compressor workload.
- * Operates at near capacity of R22.
- * If RS-44 is inadvertently mixed with R22, you will not experience any system performance issues.
- * 10-year operating history in all types of systems with all types of compressors worldwide. No other R22 alternative refrigerant can make this claim.
- * RS-44 is produced in Texas, the UK and China.

IN-STOCK & SHIPPING NOW!

Important Information: Because RS-44 is compatible with mineral, alkylbenzene oils and polyester lubricants found in R22 systems, there should be no need to change the existing lubricants used by manufacturers. Recommendations on lubrication should be followed. RS-44 is compatible with all materials commonly used in refrigeration systems previously charged with R22. In general, materials which are compatible with R22 can be used with RS-44. It is recommended to check specific equipment name plates for oil type. These are also available on our website: www.marplat.com regarding oil type and materials compatibility.
